

- Extracellular matrix organization
- Hemostasis
- Cytokine Signaling in Immune system
- Axon guidance
- Regulation of Insulin-like Growth Factor (IGF) transpo
- Regulation of gene expression in endocrine-committed
- Neuronal System
- Signaling by Receptor Tyrosine Kinases
- Amplification of signal from the kinetochores
- SLC-mediated transmembrane transport
- Formation of the anterior neural plate
- Cell junction organization
- MHC class II antigen presentation
- Signaling by GPCR
- Other interleukin signaling
- O-linked glycosylation
- Interferon gamma signaling
- Aspartate and asparagine metabolism
- Oncogene Induced Senescence
- EPH-Ephrin signaling
