

- Extracellular matrix organization
- Signaling by Receptor Tyrosine Kinases
- Regulation of Insulin-like Growth Factor (IGF) transpo
- Nervous system development
- Diseases of glycosylation
- Hemostasis
- Elastic fibre formation
- Semaphorin interactions
- Diseases associated with glycosaminoglycan metabo
- Scavenging by Class A Receptors
- Muscle contraction
- Neuronal System
- Nuclear signaling by ERBB4
- Signaling by GPCR
- Dissolution of Fibrin Clot
- CHL1 interactions
- Protein-protein interactions at synapses
- Syndecan interactions
- MET activates PTK2 signaling
- Gastrulation
