

- Extracellular matrix organization
- Cholesterol biosynthesis
- Regulation of Insulin-like Growth Factor (IGF) transpo
- Degradation of the extracellular matrix
- Hemostasis
- Interleukin-4 and Interleukin-13 signaling
- Signaling by Receptor Tyrosine Kinases
- Nervous system development
- Plasma lipoprotein remodeling
- Regulation of gene expression in endocrine-committ
- GPCR ligand binding
- Neuronal System
- Cell surface interactions at the vascular wall
- Signaling by TGFB family members
- Activation of Matrix Metalloproteinases
- O-linked glycosylation of mucins
- Receptor-type tyrosine-protein phosphatases
- Cell junction organization
- Defective CHST3 causes SEDCJD
- Cholesterol biosynthesis via desmosterol
