

- Extracellular matrix organization
- Collagen formation
- Interleukin-4 and Interleukin-13 signaling
- Diseases of glycosylation
- Regulation of Insulin-like Growth Factor (IGF) transpo
- Laminin interactions
- Hemostasis
- Elastic fibre formation
- Signaling by Receptor Tyrosine Kinases
- Muscle contraction
- Glycosaminoglycan metabolism
- Signaling by TGFB family members
- Dissolution of Fibrin Clot
- Cell-Cell communication
- Peptide ligand-binding receptors
- Striated Muscle Contraction
- Nervous system development
- Chondroitin sulfate biosynthesis
- LIG-ADAM interactions
- Activation of Matrix Metalloproteinases
